

# IVP ROTATING BEACON

Model IVP100

*The IVP utilizes the same pod design as Federal Signal V-shaped lightbars.*

Federal Signal's IVP rotating beacon is perfect for mounting to the rear of a fire apparatus. Model **IVP100** is configured with a single rotator. The **IVP200** has a rotator and also includes a stationary light ideal for lighting the hose bed area of a fire apparatus. The IVP200 comes with a clear dome and a colored front insert.

All IVP models use the same pod construction as the Vector® and ViewPoint™ lightbar systems. Your complete NFPA upper level warning system can be configured with similar looking products by writing specifications to include a Vector or ViewPoint lightbar with IVP beacons.

## COLOR CUSTOMIZATION

Modular domes and inserts are available for the IVP in a variety of colors. For two-color lighting, inserts are available that are mounted in place with the dome using two screws. When ordering, specify dome and insert colors (red, blue, amber, clear, or green).

## EASY INSTALLATION

The IVP is available with a permanent mount that allows installation on the rear of a fire apparatus.

## QUICK REFERENCE

### FEATURES

- NFPA compliant when used as part of a complete system.
- Unique warning light design.
- Complements Vector and ViewPoint V-shaped lightbars.
- Dual function light available with rotator and stationary hose bed lighting.
- Simple color customization and dome replacement.
